

Changes to the Specification

Please change the Title of the application to read: “Method for Integrating Non-Compliant Providers of Dynamic Services into a Resource Management Infrastructure”.

Please change the Abstract of the Disclosure to read:

A method for use in a resource management infrastructure conforming to the WMI architecture are proposed. The WMI architecture includes a framework, known as CIM Object Manager (or CIMOM), which exploits WMI providers of dynamic services for the managed objects; in the WMI architecture, the CIM providers must be implemented as Common Object Model (COM) objects and must comply with a specific WMI provider interface (named "IWbemServices"). The invention discloses a method for integrating non-compliant providers, for example written in the Java language, into the WMI infrastructure. For this purpose, a bridge provider is associated with each managed object that is supported by the Java providers. The bridge provider identifies the Java provider that must be invoked to fulfill a particular request (based on a specific CIM qualifier); the parameters of the request are converted into Java types, and a corresponding method is called on an intermediate Java object. The intermediate Java object then routes the request to the appropriate Java provider.
